

Acme Cloud Solutions - Master Enterprise Capabilities & Security Architecture

1. Company Overview & Mission Founded in 2018, Acme Cloud Solutions is a premier B2B SaaS provider specializing in autonomous data orchestration. Our mission is to eliminate manual data entry through machine learning. We currently process over 50 million transactions daily for Fortune 500 clients across the finance, healthcare, and logistics sectors. Our corporate headquarters is located in San Francisco, California, with secondary engineering hubs in London and Singapore.

2. Technical Architecture & Infrastructure The Acme Cloud platform is a multi-tenant, cloud-agnostic SaaS solution built on a microservices architecture. Our backend is primarily written in Go and Python, utilizing Kubernetes for container orchestration. We deploy across AWS and Google Cloud Platform (GCP) to ensure redundancy. Clients interact with our system via a RESTful API, which supports webhooks for real-time event streaming and data synchronization.

3. Data Security & Encryption Standards Security is embedded in our foundation. All client data is encrypted at rest using AES-256 block-level encryption. All data in transit is secured via TLS 1.3 cryptographic protocols. We utilize AWS Key Management Service (KMS) with automatic key rotation every 90 days. Access to the production environment is strictly restricted via Role-Based Access Control (RBAC), requiring multi-factor authentication (MFA) and hardware security keys for all Acme engineers.

4. Disaster Recovery & Business Continuity (DR/BCP) Our disaster recovery strategy ensures near-zero downtime. Acme Cloud maintains an active-active deployment across three geographically isolated Availability Zones (AZs).

- **Backups:** Full database snapshots are taken every 12 hours, with incremental backups occurring every 15 minutes. Backups are stored in immutable, write-once-read-many (WORM) storage.
- **RTO & RPO:** Our guaranteed Recovery Time Objective (RTO) is 2 hours. Our Recovery Point Objective (RPO) is 15 minutes.
- **Testing:** We conduct full-scale disaster recovery failover simulations bi-annually.

5. Compliance & Certifications We undergo continuous monitoring and rigorous annual third-party audits. Acme Cloud is proud to maintain the following certifications:

- SOC 2 Type II (Audited by Deloitte)
- ISO/IEC 27001:2013 Information Security Management
- HIPAA Compliant (Business Associate Agreements available upon request)
- GDPR and CCPA Compliant, featuring automated data deletion and right-to-be-forgotten API endpoints.

6. Service Level Agreements (SLA) & Uptime Enterprise Tier customers are guaranteed a 99.99% monthly uptime SLA, excluding scheduled maintenance windows (which occur on

the 2nd Sunday of each month between 02:00 AM and 04:00 AM EST). In the event SLA targets are not met, Acme Cloud provides automatic service credits equivalent to 10% of the monthly licensing fee for every 0.1% of downtime below the threshold.

7. Customer Support & Onboarding Enterprise accounts receive a dedicated Technical Account Manager (TAM). Standard support operates 24/7/365 via our ticketing portal, with guaranteed initial response times (IRT) of under 30 minutes for Severity 1 (Critical Outage) issues. Standard onboarding takes approximately 14-21 business days, including data migration assistance and dedicated admin training sessions.

8. Enterprise Pricing Architecture The Acme Enterprise tier is billed annually. The standard Enterprise license includes up to 500 active user seats and 10 million API calls per month. Additional user seats are billed at \$45/user/month. Overage for API usage is billed at \$0.001 per additional call. All Enterprise contracts include single sign-on (SAML/SSO) integration at no extra cost.
